*Regarding radiographs, Medicaid believes it is the dentist's responsibility to follow the ALARA Principle (As Low as Reasonably Achievable) to minimize the patient's radiation exposure and follows the recommendations developed by the American Dental Association and the Food and Drug Administration. For new patient adults or adolescents, recommendation is for individualized radiographic exam consisting of posterior bitewings with panoramic exam or posterior bitewings and selected periapical images. A full mouth intraoral radiographic exam is preferred when the patient has clinical evidence of generalized oral disease or a history of extensive dental treatment. Medicaid will not reimburse for both a full mouth series and panoramic radiographic in the same year.
