Continuous Passive Motion Devices

Continuous Passive Motion (CPM) Devices are utilized to keep a joint in motion without patient assistance. CPM devices are meant to be used as an adjunct to conventional physical or occupational therapy programs.

A CPM device is covered when all of the following criteria are met:

- 1. Coverage is limited to post total knee replacement (TKR) or arthroplasty.
- 2. The use of the device must commence within two days of the date of surgery.
- 3. The device must be prescribed by a physician and a treatment plan must be in place which includes active physical therapy.

Coverage and Payment Policy

This device requires prior authorization.

Requesting provider must submit the following information:

- Date of surgery and type of surgery performed.
- Date CPM therapy began.
- Date of discharge from the hospital.
- Coverage is limited to that part of a 21-day period, following surgery during which the device is used in the beneficiary's home.
- Approval will be for a maximum of 21 days.
